**Madonna Undergoes Drastic 'Facial'  
Change For her Appearance At Grammy  
Awards 2023? Plastic Surgeon Shares  
SHOCKING Details-READ BELOW**

Madonna - the queen of pop - has once again stolen the show with her recent appearance at the Grammys 2023 on Sunday night, February 05, 2023. However, her recent appearance at the show did not particularly positive impact on the views. The singer once again sparked controversies when she took the stage to present an award.

The singer's fans claimed they were left speechless by her latest drastically refined face, hinting she has gone under the knife.

Madonna, 64, apparently looked younger than her age and sparked a wave of intrigue after she seemed to have undergone a cosmetic procedure to appear wrinkle-free alongside a well-defined nose and cheeks.

**However, the curious minds were put at ease by a plastic surgeon, Dr Michael Horn, to weigh in on what he believes the singer could have done from "excessive filler and Botox" to a facelift and a nose job.**

**The certified plastic surgeon from Chicago, Illinois, believes that the 'Vogue' singer has undergone a couple of surgeries because of how uplifted her facial features appeared to look.**

**A Meaww report quoted Dr Horn saying, "Over the years, Madonna, has seemingly undergone numerous plastic surgery procedures," he said. He also**

claimed that the singer's recent appearance at the Grammys 2023 was the most different-looking version of her to date.

"She has undergone a facelift ... This is obvious because her skin is tight and pulled back with no wrinkles. Her eyes also seem smaller, likely due to being pulled during a facelift," he told Daily Mail.

The doctor also hinted Madonna had a nose job and said, "Madonna previously had a natural nose that suited her face. It appears as if she had rhinoplasty since this version has a pointy tip and seems too narrow." He also claimed, "Botox was also evident on many areas of her face," while pointing out the lack of "expression lines and wrinkles," as well as her "minimal facial movement" during her speech.

The DailyMail report also speculated the star's structure of the face has noticeably changed the most.

He added, "What is most noticeable and striking is the drastic change in Madonna's facial shape into a more V-shaped structure."

Horn also went on to claim, "She has seemingly used excessive filler over time, giving her face a full appearance and taking away from the natural and pleasing bone structure she once had. Her cheekbones are more prominent than ever and appear unnaturally high."

Apart from her facial structure, Horn also pointed out that the queen of pop has also done hairline surgery including an eyebrows lift.

"It also appears that she had a brow lift which is made more noticeable by her thin eyebrows, which were formerly thick," he claimed. "It also appears that her hairline is wider now. It is also likely that she had filler injected into the temples of her head," he concluded, as reported by DailyMail.
